DETAILED ACTION

1. This communication is in response to RCE filed February 17, 2009. Claims 1, 3-15 and 17-29 are pending. Claims 1, 15, and 29 are amended. Claims 2 and 16 are cancelled.

Response to Arguments

2. Applicant's arguments, see pages 11-12 of Remarks, filed February 17, 2009, with respect to claims 1, 3-15 and 17-29 have been fully considered and are persuasive. The 35 USC 102(e) rejection of claims 1, 3-15 and 17-29 has been withdrawn.

Allowable Subject Matter

3. Claims 1, 3-15 and 17-29 are allowed.

4. The following is an examiner's statement of reasons for allowance:

Referring to claim 15, McCoskey discloses an information processing method for supporting operations on program contents distributed at scheduled times where information on each program content is managed using a database, the method comprising: setting a program at which the operations are started, based on a user supplying a control signal for selecting as the starting program, program contents from a predetermined program table accessed by the user; searching the database for information on programs in all program states to extract programs related to the starting program, wherein the searching uses information identifying the starting program and is in response to the supply of the control signal; generating a starting-program-related

information page including the extracted related programs; and presenting a detailed operation screen in response to the selection of a program related to the starting program on the starting-program-related information page, the detailed operation screen including a method of operation that can be used for the related program depending on the program state of the related program.

Referring to claim 15, Herrington (US PGPub 2004/0221310) discloses supporting operations on program contents distributed at scheduled times (Abstract; Fig. 2; para 38-39) where information on each program content is managed using a database (Fig. 1, element 54); setting a program at which the operations are started, based on a user supplying a control signal for selecting as the starting program, program contents from a predetermined program table accessed by the user (para. 51; Fig. 2, element 80); searching the database for information on programs in all program states to extract programs related to the starting program, wherein the searching uses information identifying the starting program and is in response to the supply of the control signal (para. 51, Fig. 5); generating a starting-program-related information page including the extracted related programs; and presenting a detailed operation screen in response to the selection of a program related to the starting program on the starting-program-related information page, the detailed operation screen including a method of operation that can be used for the related program depending on the program state of the related program (para. 51; Fig. 5).

Neither McCoskey taken either alone or in obvious combination disclose all the claimed features of applicant's instant invention, specifically including: *setting a program*

Art Unit: 2159

at which the operations are started, based on a user supplying a control signal for selecting, as the starting program, program content being audiovisually rendered for being watched and listened to by the user.

Also, there is no motivation to combine Herrington or any of the prior art of record to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Claims 1 and 29 are similar to claim 15 and are therefore also allowable for the same reasons listed above with respect to claim 15.

Claims 3-14 and 17-28 depend from allowed claims 1 and 15 and are therefore also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following patents or publications are cited with respect to displaying a list of recommended programming to a user and thereby allowing a user to obtain information about

Art Unit: 2159

a recommended program without inputting any instruction :

- US PGPub 2007/0094292 by Kataoka.
